 *Healthy diets and resilient ecosystems are deeply interconnected foundations of sustainable food systems.*

During the seminar, an integrated economic framework linking natural capital accounting, spatial agro-economic modelling, and consumer diet analysis will be presented to explore policy pathways toward healthier and more sustainable diets, with empirical insights from Chile.

Topics covered:

- The dual crisis of unhealthy diets and environmental degradation
- Natural Capital and the SEEA-EA framework for agri-ecosystem interactions
- Spatial agro-economic modelling to assess sustainable food production and policy scenarios
- Consumer food-choice modelling, hidden costs of current diets, and welfare effects of dietary change

“Linking natural capital to everyday food choices is essential for building healthy and sustainable diets.”

Organized by:

DAFE – University of Basilicata, Italy
CEDES – Universidad de San Sebastián (Chile)
